

## **Setup Instructions**

1. Clear a level area approximately 10ft x 11ft of any debris, sticks, sharp objects
2. Lay tarp down to cover the ground
3. Place rolled-up bounce house along edge of tarp
4. Open storage bag, and fully unroll bounce house onto the tarp
5. Orient the bounce house so the back inflation tube is facing the correct direction
6. Place the blower so that the inflation tube is fully extended when attached
7. Attach the inflation tube to the blower, and cinch securely with the strap
8. Close the TWO zippers (one of each side), and secure the velcro straps
9. Turn on the blower to inflate the bounce house
10. Place yard stakes at each corner of the bounce house, and insert them through the metal D-Rings all the way to the ground. Be sure not to pierce the tarp - you may need to fold the edges back.
11. You're ready to bounce!

## **Tear Down Instructions**

1. Be sure no one is on the bounce house, and turn off the blower
2. Open the two zippers on either side, and detach the inflation tube from the blower
3. As the bounce house deflates, orient the towers of the bounce house so they lie down in a flat square
4. Roll up the inflation tube, and tuck it into the velcro pouch
5. Remove ground stakes
6. Fold the front of the bounce house over to the middle, then the back on top of that
7. Try to remove as much air as possible, and then roll up the bounce house
8. Place the storage bag along the edge of the bounce house, and roll it in
9. Clip the storage bag closed
10. Fold up ground tarp
